Experience

2021-2022

Project name: I**fikie Soko**
Freelance

A business-to-business trading application built with React and Firebase. The platform facilitates the delivery of products between businesses, streamlining the trade process and making it easier for companies to connect and do business with each other. The user-friendly interface allows businesses to manage their deliveries, keep track of their transactions, and securely store important data using Firebase. Whether you're a small start-up or a large corporation, this React and Firebase-powered application provides a reliable and efficient solution for businesses looking to trade and grow.

2022- present

Machini Technologies Ltd

internship

- Assisted the development team in building and maintaining web applications using JavaScript, HTML, CSS, and associated technologies.
- Participated in the full software development lifecycle, including requirements gathering, coding, testing, and debugging.
- Contributed to the implementation of user interfaces, database integration, and server-side functionality under the guidance of senior developers.
- Actively collaborated with team members, participated in code reviews, and learned best practices for software development in a professional setting.

2015 - 2017

Project name: Azim shop
Freelance

- Developed a full stack e-commerce project using React, Redux, Node.js, MongoDB, and Express, showcasing your expertise in building scalable web applications.
- Implemented responsive user interfaces, integrating modern design frameworks and libraries to enhance the user experience.
- Designed and optimized the database schema using MongoDB, ensuring efficient data storage and retrieval for the e-commerce application.
- Implemented server-side functionality using Node.js and Express, including user authentication, cart management, and order processing.
- Deployed the e-commerce project to Vercel, ensuring seamless deployment and high availability of the application.
